

Date	4 July 2026
Team ID	SWTID-2026-7907
Project Name	EduGenie – Google Gemini Powered Learning Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely register and log in using email and password.	High
2	Authorization levels	Students users can access learning features, quizzes, summaries, and learning paths based on their account.	High
3	External interfaces	Integrates with Gemini AI API and FastAPI backend to generate AI-powered educational responses.	High

4	Transactions processing	Processes user learning queries, generates AI responses, quizzes, summaries and stores learning history.	High
5	Reporting	Displays learning history, generated quizzes, summaries, and student progress reports.	High
6	Business rules, etc.	Every query must generate relevant educational content. User history is stored for personalized recommendations.	High
7	Compliance to laws or regulations	User information is securely stored and follows standard privacy and data protection guidelines.	Medium
8	<i>Other</i>	Supports AI-powered question answering, concept explanation, quiz generation, summarization, and personalized learning paths.	Medium

Step 2 : Non – Functional Requirements(NFR)

S,No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	AI responses should be generated quickly with minimal delay.	Response time < 3 seconds
2	Scalability	System should support multiple students simultaneously	Supports 1000+ users
3	Security & Data Privacy	User data should be protected using secure authentication and encrypted storage.	Secure login & encrypted data
4	Reliability & Availability	Application should remain available with minimum downtime.	99% uptime
5	Usability & Accessibility	Interface should be simple, responsive, and easy for students to use.	Easy navigation on desktop & mobile
6	Other	System should be maintainable, portable, and easy to update with new AI features.	Modular architecture & easy maintenance
